Lawn Health	Composting & Soil Amendments
Lawn Renovation	Repair and Replacement
Lawn French Drain Systems	Planning & Installation
Retaining Walls	Repair or Replace [Stone, Brick, Wood]
Vegetation Management	Clearing Brush, Deadwood, Vegetation/Small Trees (up to 15 ft.)
Snow & Ice Management	Residential & Light Commercial

LAWN HEALTH Treatment Schedule

DREAM
GREENER
LAWN & LANDSCAPE
dream properties growing greener!

Round #1 (Early Spring)

Provides a custom-blended, comprehensive slow-release fertilizer and pre-emergent crabgrass control to help the lawn begin to replenish nutrients lost during winter and to recover from the stress of winter conditions.

Round #2 (Spring)

Provides granular slow-release fertilizer and pre- and post-emergent weed control for summer annual grassy weeds. Apply broadleaf and spring weed control as needed.

Round #3 (Early Summer)

Provides a balanced fertilizer with early summer nutrients and a treatment for surface and sub-surface insect control. Apply liquid broadleaf weed control as needed.

Round #4 (Summer)

Provides a blended fertilizer, with multiple organic nutrients and iron, to help the lawn through the stress conditions of late summer. As needed, apply detailed liquid weed control for any hard-to-control weeds.

Round #5 (Fall)

Provides a blended, slow-release fertilizer with nutrients to help the lawn recover from summer stress, to supply cool-season nutrients, and to help improve fall color. Apply liquid broadleaf and grassy weed control as needed.

Round #6 (Late Fall)

Provides a winterized, blended, slow-release fertilizer to encourage winter root development, reduce winter disease activity, and to help promote early spring green-up.

Beneficial Services

Aeration, Lime, Overseeding, Turf Repair and Renovation, Organic Composting.

Our Comprehensive Flea-Tick-Mosquito Program

At Dream Greener Lawn & Landscape, we specialize in providing comprehensive flea, tick, and mosquito control services to protect your property and loved ones. Our Integrated Pest Management program is designed to target key insect infestations and preventive areas on your property, ensuring a pest-free environment from May to October.

Program Schedule:

May to October: Our program runs throughout the warmer months, focusing on controlling and preventing flea, tick, and mosquito infestations.

Integrated Pest Management: We prioritize key insect infestation areas and implement preventive measures to safeguard your property effectively.

Minimum Applications: With a four-application minimum, our service guarantees thorough pest control coverage.

Pricing: Starting at \$75.00 per visit

PLANT HEALTH CARE PROGRAM

Round #1 Visit: *Dormant Oil Inspection and Treatment*

Dormant oil is an effective and ecologically friendly way to manage overwintering insect and pests before populations rise above a damaging threshold in the spring.

Round #2 Visit: *Fertilizer Inspection and Treatment*

Trees and shrubs that grow in forests get their nutrients from the soil in their natural environment. Urban and suburban soils are more nutrient deficient than native soils. Our Fertilizer is a fast-acting nutrient source that may be liquid or granular. These nutrients are applied near the root system of your plants and become available for the trees and shrubs roots to take up, store, and use.

Round #3 Visit: *Insect, Disease Inspection and Treatment*

Our arborist will evaluate your landscape and provide controls where insect or disease activity is present or probable. This will reduce foliar injury due to feeding insects, which will increase healthy leaf surfaces. Leaf surface area has a direct link with all photosynthetic light harvested which affects the overall plant growth.

Round #4 Visit: *Insect, Disease Inspection and Treatment*

Insects typically reproduce faster during the hot summer months. The higher the temperatures rise the metabolism of the insect also rises which creates a need for excessive feeding to survive. Our summer visit will target pests and disease that cause foliar damage including Japanese beetles.

Round #5 Visit: *Inspection, Insect and Disease Control*

During this late summer to early fall visit, we will identify areas of your landscape that may be experiencing activity from migrating insects. We will also check for any resurgence in insect populations due to excessive heat and dry conditions.

Round #6 Visit: *Fall Feeding for Ornamentals Fertilizer Treatment*

Our fall feeding will provide your ornamentals with valuable nutrients to be taken in and stored for used during the winter months. Plants that are fertilized in the fall have an earlier green up and tend to have less damage through the winter months.

Round #7 Visit: *Inspection and Dormant Oil Treatment*

When evening temperatures drop below freezing, it's the ideal time to apply dormant oil. This visit helps control the overwintering stages of insects such as lanternflies, scale insects, mites, and other troublesome pests affecting Pennsylvania landscapes.

Round #8 Visit: *Anti-Desiccant Treatment*

Desiccation is when water is lost through the plant leaves faster than it can be absorbed through the roots. Anti-desiccant will add a protective waxy coating to the leaves of broadleaf evergreens to slow the process of transpiration.

Specialty Services:

Specialty services that are not included in the plant health program are Arborjet injections. These treatments are specifically designed to control insects and diseases in large trees such as oaks, maples, and spruces. They are also effective in managing borers and pests that reside within trees or shrubs.

Our Comprehensive Vegetation Control Services

At Dream Greener, are trained and licensed experts are dedicated to providing top-notch vegetation control services to ensure your outdoor spaces remain vibrant and weed-free. Our comprehensive program is designed to keep your landscape looking its best from April to October.

Program Schedule:

February/March: Kickstart the season with a liquid pre-emergent treatment to prevent weed growth.

Monthly Follow-Up: Enjoy regular follow-up treatments, either liquid and/or manual, to maintain the health and beauty of your landscape

Minimum Applications: Our service includes a four-application minimum to guarantee effective results.

Pricing: Starting at \$90.00 per visit, our services are tailored to meet your needs and budget
